Outside Sensors

QAC... FW-T1G

- Passive sensors for acquiring the outside temperature and to a lesser degree – solar radiation, the wind effect and the temperature of the wall.
- Range of use -40/50...+70 °C / 5...95 % r. F.

Use

The QAC... outside sensors are for use in heating, ventilation and air conditioning plants as:

- Reference sensors for weather-compensated control
- Measuring sensors, e.g. for optimization, measured value indication, or for connection to a building automation and control system

Ordering and delivery

When ordering, please give name and type reference, e.g.: Outside sensor **QAC22**.

Equipment combinations

The outside sensors are suited for use with all types of controllers capable of acquiring and handling the sensor's measured value.

Function

The outside sensor acquires the outside temperature and - to a lesser degree - solar radiation, the wind effect and the temperature of the wall. The sensing element changes its resistance value as a function of the temperature.

Engineering notes	The sensor has a plastic housing with a removable cover. The connection terminals can be accessed after removal of the cover. Cable entry is either from the rear (concealed wiring) or from below (surface-run wires). A cable entry gland can be screwed into the bottom of the housing. The permissible cable lengths depend on the type of controller with which the sensor is		
	used. They are specified in the Data Sheet of the relevant controller.		
Mounting notes			
Mounting location	 Depending on use, the outside sensor must be located as follows: For control: On the wall of the house or building that has the windows of the occupied rooms, but the sensor must not be exposed to the morning sun. In case of doubt, it should be mounted on the wall facing north or north-west For optimization: Always on the coldest wall of the house or building (normally the wall facing north). The sensor must never be exposed to the morning sun 		
Mounting height	 Preferably in the middle of the house or building or heating zone, but at least 2.5 m above the ground. The sensor must not be fitted at the following locations: Above windows, doors, air extracts or other heat sources Below balconies or the eave of the roof To prevent measuring errors due to air circulation, the cable conduit at the sensor should be sealed. The sensor may not be painted over. Mounting Instructions are printed on the packaging.
